Background

The NPP uses ISO 20022, which is a global standard for financial messages communications. It provides a consistent language and structure for the exchange of payments as a set of comprehensive xml formatted messages.

An NPP payment is processed between two connected NPP Financial Institutions (**NPP FI**) via the NPP network. This is done via a pacs.008 message (FI to FI Customer Credit Transfer (**Clearing Request**), which is settled in the RBA's Fast Settlement Service.

NPP Participants and their sponsored financial institutions (**FIs**) may offer payment services that enable corporate and government payer customers to provide their payment instructions in a pain.001 - Customer Credit Transfer Initiation message format (pain.001). A pain.001 typically specifies the information required for a Clearing Request to be constructed and submitted for processing on the NPP platform.

NPP FIs' acceptance of pain.001 messages from such corporate and government customers is proprietary and at their discretion. The guidelines provided in this document are based on publicly available ISO message schema guidance and are subject to any additional proprietary requirements FIs may determine necessary or appropriate. As per the above terms and conditions, nothing in this document should be construed as a representation or warranty by NPPA or any NPP participating FI in relation to corporate or government payment services offered by NPP participating FIs.

Technical guidance

The pain.001 message is used to provide details of the debtor, creditor, remittance information, and any other instructions required to process a payment. The debtor (or 'Payer') details relate to the customer's account held with the NPP FI, while the creditor (or 'Payee') details may be a BSB and account number or a registered PayID such as a telephone number, Australian Business Number, organisation name or email address.

This guidance is provided for a corporate or government payer customer to consider when populating their pain.001 payment instruction with the aim of achieving straight through NPP processing of their payments. It highlights fields that:

1. need to be provided by the Payer customer in order to address a payment to a registered PayID
2. mandatory elements that are required for an NPP payment; and
3. removed elements that are **not** used for an NPP payment.

The following assumptions and conditions should be considered when using this guidance:

- This guidance is based on the mapping to the versions of the pain.001 message as specified. The guidance will be updated as required as newer versions of the pain.001 message are adopted for use;
- This guidance is based on data elements required for a NPP single credit transfer message. Any further guidance, including any data elements used specifically by any NPP overlays or additional fields that your financial institution may require, are available from your NPP FI;
