# NPP Taxation Payments Guidance

The NPP uses the ISO 20022 payment messaging standard, which provides a set of comprehensive xml formatted messages, rich in both structured and unstructured data.

Corporates, government and third parties that want to initiate a payment by instructing an NPP participating financial institution (FI) to process an NPP payment to a beneficiary party, either from their own account or from a customer's account (where customer authorisation and the relevant agreement from the processing financial institution is in place<sup>1</sup>), can do so in a variety of ways:

- Using an ISO 20022 payment initiation message (what is known as an NPP pain.001 message).<sup>2</sup>
- An alternative file format as agreed with the financial institution processing the file; or
- Via an API hosted by the processing financial institution

The guidance provided below is specific to the NPP pain.001 message and does not cater for other forms of proprietary customer to FI payment initiation. NPP FIs' acceptance of pain.001 messages from payer customers is proprietary. The guidelines provided in this document are based on publicly available ISO message schema guidance and are subject to any additional proprietary requirements FIs may determine necessary or appropriate. As per the terms and conditions above, nothing in this document should be construed as a representation or warranty by AP+ or any NPP participating FI in relation to payment services offered by NPP participating FIs.

## Categories of NPP payments

Just as a BECS Direct Entry record identifies the transaction code of the payment instruction, ISO 20022 messages use category purpose codes that identify the type of payment being made. AP+ has defined the use of specific category purpose codes for NPP messages for certain types of payments. This can be populated at the time the payment instruction is provided to the financial institution.

## NPP ISO 20022 Taxation payment guidance

The following guidance outlines the data elements of the NPP message that may be populated when paying a taxation (**Tax**) payment on the NPP. The identification of the payment as a Tax payment enables adherence to the tax payment requirements and facilitates future data opportunities.

The classification of a Tax payment is a payment made to a Federal, State, Territory or Local government. Each governing body requires the inclusion of the unique payment reference number (PRN), or specific payment reference information as defined by the authorised body. The inclusion of the PRN or reference provides for the correct allocation of the payment to the correct account.

---

<sup>1</sup> Third party payment initiation supported by customer authorisation.

<sup>2</sup> For further information on the construction of the pain.001 message, please refer to the ISO20022.org website (<https://www.iso20022.org/>) and the NPP Payment Initiation guidance document.

AP+ requires that the following elements are populated in the payment initiation message to ensure the correct reporting of Tax payments.

Pain.001 element name	Value
<b>End to End Identification</b>	Payment Reference Number (PRN)*/Customer Reference
<b>Category Purpose</b>	TAXS
<b>Creditor Reference</b>	Payment Reference Number (PRN)* / Customer Reference

\*Note: the inclusion of PRN in both the End to End Identification and Creditor Reference is to ensure FIs can provide the value in Customer Reporting.

AP+ recommends contacting your Financial Institution to confirm implementation requirements for the NPP pain.001 message or alternative proprietary payment initiation arrangements for taxation payments.

### Implementation of NPP message usage guidelines for taxation payments

NPP participating financial institutions are obliged to **receive** NPP messages with additional defined data elements for tax payments. Financial institutions can choose whether or not to support **sending** these payment message types according to the needs of their customer base and their individual commercial offerings.

AP+ will periodically review and update the defined data elements contained within this document for tax payments. AP+ will also consider developing additional message usage guidelines for other payment types in the future according to market demand. Further details regarding the NPP message usage guidelines will be made available on the AP+ website at [www.auspayplus.com.au](http://www.auspayplus.com.au).
